

EMERGING THERAPY APPRAISAL WORKSHEET

Client Name: _____ Date: ____

Proposed Intervention/Therapy: _____

Section 1: The Innovation Gap Assessment

Use this section to distinguish between "biohacking hype" and clinical potential.

1. Source of Interest:

2. ☐ Peer-reviewed journal

3. ☐ Clinical seminar

4. ☐ Social media/Influencer

5. ☐ Client request

6. **Mechanistic Plausibility:** Does the biological "mechanism of action" make sense for this client's biochemical individuality? (e.g., Does it actually target their identified root cause?)

7. ☐ Yes - ☐ No - ☐ Uncertain

8. Evidence Level:

9. ☐ **Level A:** Meta-analysis/Systematic Reviews (Gold Standard)

10. ☐ **Level B:** Small RCTs or Human Clinical Trials

11. ☐ **Level C:** Animal/In-Vitro studies only (Mechanistic evidence only)

12. ☐ **Level D:** Anecdotal/N-of-1 "Marketing Science"

Section 2: The Safety-Efficacy Matrix

Plot the intervention below to determine the ethical path forward.

	High Efficacy (Proven Results)	Low Efficacy (Speculative)
High Safety (Low Risk)	GREEN LIGHT: Proceed with standard monitoring.	YELLOW LIGHT: Proceed with caution; focus on "Healing Response."
Low Safety (High Risk)	RED LIGHT: Requires medical supervision/referral.	STOP: Duty to Discourage. High opportunity cost.

Current Placement: _____

Section 3: Ethical Communication & Marketing Check

Refining the language used with the client to avoid "The Cure Trap."

- **Avoid:** "This will cure/reverse [Condition]."
- **Use:** "This protocol supports [Function] and addresses biological barriers to health."
- **Identify Opportunity Cost:** Is this therapy preventing the client from seeking necessary conventional care (e.g., insulin, oncology)?
 - ☐ No - ☐ Yes (If yes, intervention must be discouraged).

Section 4: Clinical Decision & Reflection

Practitioner Recommendation: - ☐ **Approve:** Evidence and safety profiles are acceptable for the Target Phase. - ☐ **Conditional:** Proceed only after foundational "Optimize" phase is complete. - ☐ **Discourage:** Insufficient safety data or high opportunity cost.

Collaborative Notes (Client's Values & Expectations):

Agreed Objective Monitoring (How will we measure success?):

Next Steps:

- ☐ Review independent research (non-industry funded)
- ☐ Complete foundational R.O.O.T.S. protocols first
- ☐ Schedule follow-up in _____ days to assess response
